

VENKAT ABHILASH BALIMIDI

JAVA SOFTWARE ENGINEER

Java 8-21 | Spring Boot | Microservices | AWS | Kafka | Kubernetes

Leicester, United Kingdom • +44 7881 846591 • venkatbalimidi@gmail.com • Open to relocation

6 YEARS

Commercial engineering

SPRING BOOT

Enterprise backend services

JAVA 8-21

Backend and microservices

PROFESSIONAL SUMMARY

Java Software Engineer with six years of commercial experience building and supporting enterprise applications, scalable microservices and high-volume financial-data platforms. **Strong commercial expertise in Java 8-21, Spring Boot, Spring Cloud, REST APIs, GraphQL, Kafka, AWS, Docker and Kubernetes.** Combines hands-on software delivery with deep production insight, translating incidents and operational evidence into permanent code, performance and reliability improvements. Experienced in secure, regulated environments, AI-enabled backend services and cross-functional Agile delivery.

TECHNICAL EXPERTISE

JAVA ENGINEERING Java 8/11/17/21, Spring Boot, Spring Framework/MVC, Spring Cloud, Microservices, Distributed Systems,DDD, OOP, SOLID, JVM tuning

CLOUD AND PLATFORM AWS EC2, S3, Lambda, ECS, EKS, RDS, SQS, Kubernetes, Docker, Jenkins, GitHub Actions, CI/CD, Git, Gradle

APIS, DATA AND MESSAGING REST APIs, GraphQL, Apache Kafka, Event-Driven Architecture, SQL Server, MySQL, JPA, Hibernate, JDBC, H2

QUALITY AND AI TDD, BDD, JUnit, Mockito, API/integration/regression testing, OpenAI API, Anthropic Claude API, Prompt Engineering, Context Optimisation, RAG

FRONTEND React, Next.js, AngularJS, JavaScript, JSP, JSF, HTML, CSS

PROFESSIONAL EXPERIENCE

Application Support Analyst | IFS UK

Aug 2022 - Aug 2026

Edinburgh, UK - remote from Leicester

TECH STACK Java 8-21, Spring Boot, Spring Cloud, Microservices, REST, GraphQL, Kafka, AWS, Docker, Kubernetes, React, Next.js, AngularJS, SQL, Jenkins, GitHub Actions, OpenAI, Claude, RAG

- Engineered scalable, secure Spring Boot and Spring Cloud microservices for core enterprise systems in a highly regulated environment, applying distributed-system and domain-driven design principles.
- Built and enhanced RESTful and GraphQL integrations for secure, high-performance communication between internal services, external systems and customer-facing applications.
- Developed event-driven services using Apache Kafka to decouple processing, improve resilience and support reliable asynchronous data flows.
- Containerised Java applications with Docker and supported Kubernetes orchestration across AWS ECS and EKS, improving deployment consistency, scalability and service resilience.
- Delivered AI-powered Spring Boot capabilities using OpenAI and Anthropic Claude APIs, prompt and context optimisation, and RAG architectures for grounded, context-aware responses.
- Optimised Jenkins and GitHub Actions CI/CD pipelines, automating build, test and deployment controls to accelerate releases and reduce deployment risk.
- Improved cloud observability across AWS services including EC2, S3, Lambda, RDS and SQS, strengthening performance monitoring and incident response.
- Resolved priority production issues through log analysis, SQL investigation, defect reproduction and root-cause analysis; applied targeted fixes, JVM tuning and regression testing to restore service within SLAs.
- Partnered with frontend, QA and infrastructure engineers across React, Next.js, AngularJS, JSP, JSF, JavaScript, HTML and CSS delivery, earning client appreciation for technical ownership and dependable outcomes.

Associate Systems Engineer | Tata Consultancy Services (TCS)

Jan 2019 - Dec 2020

Mumbai, India

TECH STACK Java, Spring Boot, Spring MVC, Microservices, REST APIs, SQL Server, JDBC, Jenkins, GitHub, Gradle, Pivotal Cloud Foundry

- Contributed to scalable Java microservices and financial-data processing services, supporting reliable, high-throughput enterprise workflows.
- Built Spring-based backend components and RESTful services across requirements, design, implementation, automated testing, deployment and production support.
- Optimised SQL Server queries, stored procedures and JDBC integrations for dependable high-volume data processing and business-critical workflows.

PROFESSIONAL EXPERIENCE - CONTINUED

Tata Consultancy Services (TCS) - continued

- Applied object-oriented design, reusable patterns and separation of concerns to deliver clean, maintainable code supported by peer review, unit testing and regression testing.
- Supported Jenkins, Gradle, GitHub and Pivotal Cloud Foundry delivery pipelines across multiple environments, improving release consistency and traceability.
- Collaborated with analysts, developers and QA engineers to refine requirements, estimate work and resolve priority defects in an Agile regulated-finance programme.
- Received client appreciation for dependable delivery and collaborative resolution of priority defects and business-critical changes.

SELECTED ENGINEERING PROJECT

IT Service Desk Microservices Platform | Personal Project 2026
Assyst-inspired service management platform

- TECH STACK** Java 21, Spring Boot, Spring Cloud, Spring Data JPA, Hibernate, MySQL, JWT, Eureka, Config Server, API Gateway, Maven, Postman
- Designed independently deployable user, incident, assignment and lifecycle services around clear domain boundaries, with layered controller, service and repository components.
 - Implemented validated REST endpoints backed by MySQL through Spring Data JPA and Hibernate, with structured exception handling and API testing.
 - Configured Eureka service discovery, Spring Cloud Config and an API Gateway to provide centralised configuration, routing and a single external entry point.
 - Implemented JWT authentication, role-based access and client-side load balancing across multiple service instances for users, analysts and administrators.
 - Applied DTO validation, structured exception handling and consistent API response models to improve maintainability, error transparency and client integration.
 - Created unit, integration and REST API tests with JUnit, Mockito and Postman to validate service behaviour, persistence flows and security rules.

CURRENT TECHNICAL DEVELOPMENT

PYTHON AND FASTAPI Currently learning Python and FastAPI through small hands-on projects, covering Python fundamentals, virtual environments, type hints, input validation and basic REST API development.

ENGINEERING METHODS AND DELIVERY

- **Production reliability:** translated logs, monitoring evidence and recurring incidents into permanent code, configuration and regression-test improvements.
- **Cloud-native delivery:** combined AWS services, Docker, Kubernetes and automated CI/CD controls to support repeatable, scalable application releases.
- **Secure integration:** designed service boundaries and REST/GraphQL contracts with validation, role-based access and dependable error handling.
- **Quality engineering:** applied TDD/BDD practices, peer review, JUnit, Mockito, API testing and regression validation throughout the SDLC.
- **Cross-functional delivery:** worked effectively with product, development, QA, infrastructure and customer-facing teams in Agile regulated environments.

EDUCATION

MSc Computing | De Montfort University, United Kingdom | February 2021 - July 2022
B.Tech Computer Science & Engineering | K.S.R.M. College of Engineering, India | June 2018

CORE STRENGTHS

Backend engineering • Microservices architecture • Production reliability • Performance optimisation • Secure API design • High-volume data systems • Agile delivery
